

# Shipping Information

**Quote #: QU01003652**

**Order #: ORD2003126**

**Purchase Date: 02/08/23**

**Payment Method: Credit Card**

**Customer Name: Kathryn Ramsey**

**Institution:**

**Email: kramsey@uri.edu**

**Phone: +14018742932**

**Address: 7 Greenhouse Road 420 Avedisian Hall Kingston, RI 02881 US**

**Minor Outlying Islands**

**Bill to:**

**Kathryn Ramsey**

**kramsey@uri.edu**

**7 Greenhouse Road**

**Kingston, RI 02881**

**Please print this page and include it in your package**

**PRINT PAGE**

**All Results in 2 Weeks or Less**

Measurement Method: Nanodrop

## Sample Details

#	Sequence Offering	Variant Calling \$10.00/Sample	Sample Name	Sample Concentration ng/uL
1	200Mbp Sequencing Sample	<input checked="" type="checkbox"/>	5A113	20
2	200Mbp Sequencing Sample	<input checked="" type="checkbox"/>	4A3M1	20
3	200Mbp Sequencing Sample	<input checked="" type="checkbox"/>	4A3M3	20
4	200Mbp Sequencing Sample	<input checked="" type="checkbox"/>	4A3M4	20

## Overall Notes

I will forward the sequence file for variant calling before tomorrow morning

## When submitting your samples please ensure they meet the following requirements:

Samples should be sent in microcentrifuge tubes labeled with permanent marker or sealed 96-well PCR plates for larger submissions. (Please send PCR plates on dry ice to reduce the possibility of leaking or cross contamination.)

We ask customers to not use sticker labels, as they are prone to fall off.

## For DNA Samples:

Samples should be contained within water, Tris or TE buffer, and can be shipped overnight at ambient temperature.

### Illumina Samples require:

Volume of at least 30 uL

Concentration of at least 10 ng/uL measured by Qubit (higher if by Nanodrop)\*

### PacBio Samples require:

Volume of at least 60 uL or more.

Concentration of at least 35 ng/uL measured by Qubit\*

Please ship PacBio samples on dry ice.

**Nanopore Samples require:**

Volume of at least 60 uL

Concentration of at least 40 ng/uL measured by Qubit (100 ng/uL as measured by Nanodrop)\*

For Nanopore Combo Samples, please submit 1 Illumina and 1 Nanopore aliquot for each sample, following submission requirements above.

**For orders with extraction packages, please send:**

Cell pellets of  $10^9$  cells or more sent with ice packs or dry ice, or

Individually sealed agar plates with sizeable growth, equivalent to  $10^9$  or more cells, at ambient temperature. (Please include absorbent material with plates in case of leaks due to temperature changes.)

**For RNA Samples:**

Must be shipped on dry ice

Volume of at least 20 uL

Concentration of at least 50 ng/uL

DNAse treatment recommended, but not required

RIN > 6 recommended, but not required

**For SARS-CoV-2 Samples**

Must be shipped on dry ice

Volume of at least 15 uL

**If your samples are unable to meet these requirements due to the nature of your organism, please contact us to see if custom library preparation is available.**

\*Please our [FAQ](#) for more information about the differences in Qubit and Nanodrop measurements.

**Shipping Information:**

Please send samples to:

**SeqCenter**

**91 43rd Street, Suite 250**

**Pittsburgh, PA 15201, USA**

For additional shipping information, please visit our [Shipping Guidelines](#) page or contact us at [info@seqcenter.com](mailto:info@seqcenter.com)
